## CCpilot V700 NEXT GENERATION IMX8X BASED DISPLAY

The **CCpilot V700** is designed to address challenges created by the rapid increases in software content in modern mobile machines. Systems for improved productivity, reduced environmental impact, safety and security are software intensive. And the performance of graphical user interfaces is a key success factor for how the machine system is perceived. To efficiently realize these types of solutions, it is critical to use a platform that supports capable software frameworks and toolchains.

The V700 is based on an i.MX 8DualXPlus processor which features a very powerful GPU that can deliver triple the framerate of displays using earlier generation of cores, e.g. iMX 6. The V700 leverages the next generation of

graphics APIs and frameworks, making it possible to realize advanced systems in a lean way. The GPU and software layers of the V700 support Vulkan, enabling the advantages of the new graphics backend of QT 6, which is expected to be released in Q4 2020.

The CCpilot V700 offers support for rapidly emerging technologies like multiple digital camera streams, stream stitching to create panoramic views, object detection and classification as well as speech recognition. With its vast software capabilities and state-of-the-art hardware, the CCpilot V700 is a future ready platform for machine intelligence.
